ISE 2011 Release

Mode-AL to Launch “Very Low Level Desk Mount” at ISE 2011

Tatting End, UK, 11 January 2011: Continuing Mode-AL’s tradition of designing and manufacturing genre-defining products, Mode-AL will introduce its “Very Low Level Desk Mount” (VLL) at ISE 2011. Developed for Mode-AL’s VX range of video conferencing furniture as a cost-effective solution for mounting preview screens on a desk rather than using screen lifters, this simple yet effective mount allows any size screen to be mounted at a very low level; as much as 10mm below desk level with hand adjustable tilt from 90 degrees (vertical) to 45 degrees back.

The VLL is available as a standalone unit or with an in-built cable cubby. This versatile mount can be used in Broadcasting, Telepresence, Court Rooms, Parliamentary chambers and many other locations where the screen needs to be as unobtrusive as possible.

The mount is available in three styles - Surface mount, Inset and Under Desk top, providing for retro fits as well as new build applications.

The surface mount option is the simplest to fit, with a single rectangular hole in the desktop and a smooth curve lip. The unit can easily be dropped in and secured from underneath.

The inset option unit fits flush with the desktop with a routed 10mm deep profile to match the top plate and a rectangular hole below. The unit can also be dropped in and secured from below.

The under desk top mounted option provides seamless integration with the desktop, with the mechanism attached from underneath and an integrated under cover providing the finishing touch.

Ideally suited for 19-24” monitors, each VLL desk mount is configured in the factory to suit individual screen requirements. Units for the most popular screens will be available from April 2011, providing the perfect finishing touch for high end installations.

###

About Mode-AL

Mode-AL was founded in 2001 to manufacture Bespoke Modern Furniture for the domestic market. By 2001 we had found that our clientele was more commercial than domestic based and we have continued to design 'Furniture for Technology' since then. Now recognised as the market leader for high end AV and Broadcast solutions for mounting multiple monitors, we have developed our own range of screen mounts for this particular market concentrating on the ease of installation, quality and adaptability. These units combine with our support structures, providing a modular system for mounting screens and management of the cables and ancillaries.

Being acknowledged as the originator of the first Flat Screen Monitor Stacks, has enabled Mode-AL to develop an enviable client list including Turner, Telemundo, BBC, ITV, TV2A, ESPN, Sky, Sony, Panasonic, Fujitsu, Morgan Stanley, Price Waterhouse Coopers, Honda, Mercedes, Siemens, HM government and many more, not to mention many system integrators, Video Conferencing companies and AV installers all over the world.

With the imminent move (May 2011) to our new custom built 10,500 sq ft facility in the UK and the recent relocation of our US manufacturing plant to a new 11,000 sq ft facility , we have brought many of our manufacturing processes in house, enabling us to improve quality and turnaround times for all our products
