Featuring at ISE 2011:

Mode-AL, the market leader for the design and manufacture of multiple screen mounting solutions for broadcast, audio visual, video conferencing, digital signage and security industries will introduce its latest innovation in the form of a new "MA-OEM-66" tilt mount with the ability to mount anything from a 24" to an 82" screen with exactly the same type of system. The MA-OEM-66 mount will be available across the Mode-AL range, including plasma stands and integrated furniture solutions with three variants: Portrait, Landscape and Vesa (for smaller Vesa-compliant screens 200x200 and below). All the specifier has to do is to select the type of variant and advise screen make and model number for configuration by Mode-AL prior to dispatch.

Designed for professional installers, the MA-OEM-66 features significant improvements that amount to vastly simplified ordering and substantial reductions in installation and set-up times.

The new mounts include a lockable tilt; positional stud mounts for secure fixing onto studs whilst still providing full flexibility; and a five-degree backward tilt allows easy access for screen connections and the ability to secure the screen mounts to the wall beam.

Mode-AL will also unveil its "Very Low Level Desk Mount" (VLL) at ISE 2011. Developed for Mode-AL's VX range of video conferencing furniture as a cost-effective solution for mounting preview screens on a desk rather than using screen lifters, this simple yet effective mount allows any size screen to be mounted at a very low level; as much as 10mm below desk level with hand adjustable tilt from 90 degrees (vertical) to 45 degrees back.

The VLL is available as a standalone unit or with an in-built cable cubby. This versatile mount can be used in Broadcasting, Telepresence, Court Rooms, Parliamentary chambers and many other locations where the screen needs to be as unobtrusive as possible.

###

About Mode-AL

Mode-AL was founded in 2000 to manufacture Bespoke Modern Furniture for the domestic market. By 2001 we had found that our clientele was more commercial than domestic based and we have continued to design "Furniture for Technology" since then. Now recognized as the market leader for high end AV and Broadcast solutions for mounting multiple monitors, we have developed our own range of screen mounts for this particular market concentrating on the ease of installation, quality and adaptability. These units combine with our support structures, providing a modular system for mounting screens and management of the cables and ancillaries.

Being acknowledged as the originator of the first Flat Screen Monitor Stacks, has enabled Mode-AL to develop an enviable client list including Turner, Telemundo, BBC, ITV, TV2A, ESPN, Sky, Sony, Panasonic, Fujitsu, Morgan Stanley, Price Waterhouse Coopers, Honda, Mercedes, Siemens, HM government and many more, not to mention many system integrators, Video Conferencing companies and AV installers all over the world.
